

Remote Access of NMR Data

9 Oct 2018; DLO

You can access your NMR data from our Samba server by sending us your i.p. address and group name:

- Go to Google and confirm that you have a live Internet connection.
 - If you don't have an Internet connection, you should get a page asking you for netID information
 - Fill out the form, and wait till you have a live Internet connection
- In Google, type "my IP address" and send us that number (nduay@illinois.edu or dolson@illinois.edu)
 - Also tell us what **research group** you are in
- Use the actual computer and cabled Internet connection that you intend to use
 - **Do not use a wireless connection**
 - This must be a *static* i.p. address; This must be on a secured campus network connection
 - Check your i.p. address here to see if it is OK:
 - <http://ping.eu/rev-lookup/>
 - As long as it ends in **uiuc.edu** or **illinois.edu**, it's OK.
- See the document information about Data Backup Options, which is in #16 in the list of training materials e-mailed to you.
 - The Data Backup Options information is on pages 4-5 of item #16.
- Ignore any information about this not working on Mac computers. It will work just fine.

**Use the NMR data access path to
BACK-UP YOUR DATA
on a regular basis!**

**This is the responsibility
of every individual scientist!**

Here's a device in the Chem Storeroom that can be used to connect a USB port to a standard Internet cable:
